

MAP A.5 | Productive Capacity Index

Productive Capacities Index (PCI) (2022)

Evolution of PCI (2000-2022)

**Note:** UNCTAD's Productive Capacities Index (PCI) summarizes the levels of productive capacities based on three pillars: the productive resources, entrepreneurial capabilities and production linkages which together determine the capacity of a country to produce goods and services and enable it to grow and develop. This index provides a quantitative measure of the three pillars of a given economy, which are further broken down into eight categories: human capital, natural capital, energy, transport, ICT, institutions, private sector and structural change. The overall PCI is a composite index that summarizes the eight categories in a single indicator.
